

Test Strategy Document – Mobile Banking App

1. Document Information

Field	Details
Document Title	Mobile Banking App – Test Strategy
Application	SecureBank Mobile
Document Type	Test Strategy
Prepared By	S Sahana
Version	1.0
Testing Type	Mobile Application Testing

2. Objective

The objective is to ensure that the SecureBank Mobile application is **functional, secure, reliable, user-friendly, and compatible** across supported mobile devices and operating systems.

3. Scope

In Scope:

- User registration/login
- OTP verification
- Balance enquiry
- Account statement
- Fund transfer
- Beneficiary management
- Bill payment
- Transaction history
- Notifications
- Logout
- Session timeout

- Error handling

Out of Scope:

- Testing the bank's internal server infrastructure
- Physical ATM hardware
- Third-party banking systems that are outside the application's control

4. Testing Types

Testing Type	Purpose
Functional Testing	Verify that banking features work as expected
UI Testing	Verify screens, buttons, fields and navigation
Usability Testing	Check whether the application is easy to use
Compatibility Testing	Test across different devices and OS versions
Security Testing	Verify authentication, authorization and session security
Performance Testing	Check application response under expected load
Regression Testing	Ensure existing features work after changes
Accessibility Testing	Check usability for users with accessibility needs
Installation Testing	Verify installation, update and uninstall behavior

5. Test Environment

Testing will be performed using:

- Android smartphones
- iOS smartphones
- Different screen sizes
- Different supported Android/iOS versions
- Wi-Fi connection

- Mobile data connection
- Different network conditions

6. Device & OS Coverage

Testing should cover representative:

- Low-end device
- Mid-range device
- High-end device

and supported versions of:

- Android
- iOS

Testing should also consider portrait and landscape orientation where applicable.

7. Test Data

Test data should include:

- Valid user credentials
- Invalid credentials
- Valid and invalid OTPs
- Test account numbers
- Test beneficiary details
- Valid and invalid transaction amounts
- Valid and expired sessions

Real customer banking information should not be used for testing.

8. Entry Criteria

Testing can begin when:

- A testable application build is available.
- Required features are implemented.

- Test environment is available.
- Test data is prepared.
- Major blocking issues are resolved.

9. Exit Criteria

Testing can be completed when:

- Planned test cases have been executed.
- Critical and high-severity defects are resolved or formally accepted.
- Regression testing is completed.
- Major supported devices have been tested.
- Test results and defects are documented.

10. Risk and Mitigation

Risk	Mitigation
Application crashes	Perform functional and stability testing
Security vulnerability	Perform security-focused testing
Device compatibility issues	Test on multiple devices and OS versions
Network failure	Test different network conditions
Transaction failure	Test success, failure and timeout scenarios
Data loss	Test interruption and recovery scenarios

11. Defect Management

Defects will be recorded in **Jira**.

Each defect should contain:

- Bug ID
- Summary

- Description
- Steps to reproduce
- Expected result
- Actual result
- Severity/Priority
- Environment
- Screenshots or other evidence
- Assignee
- Status

Defects will move through statuses such as:

To Do → In Progress → Done

12. Tools

- **Jira** – Defect tracking
- **Android/iOS devices** – Mobile testing
- **Browser/device developer tools** – Investigation where applicable
- **Screen recording/screenshots** – Test evidence
- **Spreadsheet/Document** – Test documentation

13. Test Deliverables

The following deliverables will be maintained:

- Test Strategy Document
- Test Scenarios
- Test Cases
- Defect Reports
- Regression Test Cases
- Test Execution Results
- Screenshots/Test Evidence

- Final Test Summary

14. Roles and Responsibilities

Role	Responsibility
QA Tester	Design and execute test cases
Developer	Fix reported defects
QA Lead	Review testing activities and results
Project Manager	Track project progress and risks

15. Conclusion

The testing strategy focuses on verifying the **functionality, security, usability, compatibility, performance, and reliability** of the SecureBank Mobile application. Testing will use risk-based prioritization and regression testing to help ensure that important banking functions remain reliable after changes.
